NOTES							

Data source: Cases reported by IHR NFPs to PAHO/WHO and/or through Member States websites or official news publication

<sup>&</sup>lt;sup>a</sup> Epidemiological Week for which information is available.

Suspected case: patient with acute onset of fever >38°C (101°F) and severe arthralgia or arthrifis not explained by other medical conditions, and who resides or has visited epidemic or endemic areas within two weeks prior the onset of the symptoms. Confirmed case: a suspected case with any specific CHIK test (viral isolation, RT-PCR, Ig M, or four-fold increase of chikungunya specific antibodies titers) - PAHO(CDC confirmed case definition available at www.paho.org/chikungunya.

Incidence ( autochthonous suspected + autochthonous confirmed) / 100,000 pop.
