<u>NOTES</u>							

^a Epidemiological Week for which information is available.

* Suspected case: patient with acute onset of fever >38°C (101°F) and severe arthralgia or arthritis not explained by other medical conditions, and who resides or has visited epidemic or endemic areas within two weeks prior the onset of the symptoms.

Confirmed case: a suspected case with any specific CHIK test (viral isolation, RT-PCR, Ig M, or four-fold increase of chikungunya specific antibodies titers) - PAHO/CDC confirmed case definition available at www.paho.org/chikungunya.

Incidence (autochthonous suspected + autochthonous confirmed) / 100,000 pop.

⁴ PAHO/WHO. Basic Indicators, 2013. http://www.paho.org/hg/index.php?option=com_docman&task=doc_download&gid=23535<emid=270&lang=en, except St. Barthelemy ("Populations légales 2009 entrent en vigueur le 1er janvier 2012." Recensement de la population. INSEE. Retrieved 2 January 2014).

Department of Health data: http://www.salud.gov.pr/Chikungunya/Pages/default.aspx

The total cases excludes the data from Puerto Rico and US Virgin Islands and includes 2 cases locally adquired in Florida.

Ministry of Health data: http://www.mpps.gob.ve/index.php?option=com_content&view=article&id=7293emid=18

The autochthonous confirmed cases includes one case with unknown travel.

Data published by Le point épidémiologique, N°11, 2014.

Data source: Cases reported by IHR NFPs to PAHO/WHO and/or through Member States websites or official news publication
